

# PEKASO

**Start off on the right feed**

Pekaso is the cornstone of the whole Bivit starter concept. Pekaso is the answer to all the requirements that the ideal starter should combine. It is a very palatable, ideally balanced complete feed that can be served as a dry as well as a wet feed.

## APPLICATIONS:

### ***NURSERY (AUTOMIX)***

- From the age of 7 days
- Total replacement of sow's milk
- Fast and high intake
- **High solubility and stability in water**
- **Free flowing and no bridging or caking**
- Strategy:
  - If > 13 piglets/sow
  - First born piglets only moved from farrowing pen to nursery
  - Use pre-weaned sows as foster mother for supernumerary piglets

### ***FARROWING PEN***

- Complementary to sow's milk
- Stimulate feed intake
- Supplementary nutrients for piglets
- Applicable as a wet as well as a dry feed

### ***FLAT-DECK***

- Ideal start for low weight piglets (< 6 kg) combined with weaning starter

## FEEDING STRATEGY:

### **Target:**

- Uniform piglets at 10 weeks of age for weaned piglets at 3 or 4 weeks
- Compensatory growth in low weight piglets

Day	Piglets < 6 kg	Piglets > 6 kg
0-4	Water (+ Fe)	
4-21	PEKASO (first paste, afterwards creep-feed + water)	
21-35	PEKASO 30% + Weaning-starter 70%	Weaning-starter
35-42	Weaning-starter	
42-...	Growth-starter
